

Student abstract review email audit

264 abstracts: 260 accepted, 2 rejected and 2 pending. 262 have a recorded review timestamp. Five accepted records have current sending blockers: two invalid email addresses and three missing presentation dates. Those three also lack poster codes. 262 email addresses have mail domains; 2 fail application validation.

Historical sending and delivery status remains unknown. Results are returned to the reviewer but not saved in the database. Production logs were inaccessible during this investigation because the saved Vercel token was invalid. Current address/data problems do not establish what happened at the time of an earlier review. A mail domain does not prove mailbox existence or inbox delivery.

The current review screen displays “Review saved, but the email was not sent” when the API reports a failure or skip. The review status is saved before sending. Closing the dialog loses the visible result. Invalid addresses produce missing-recipient; accepted abstracts without a presentation date produce invalid-presentation-date. There is no persistent send history or automatic retry in this flow. No missing registration contacts were found.

Recommended action: confirm and correct the two email addresses; supply the actual committee-assigned poster codes and presentation dates for the three incomplete accepted records; obtain provider send/bounce logs for other non-receipt cases. Record future attempts and distinguish mail-server acceptance from final delivery. No emails were sent and no database records were changed during this audit.

Audit generated: 2026-09-05T05:45:29.060Z
